Education

2025–Present **B.Tech, Computer Science & Engineering (CSE Core)**, VIT Chennai, CGPA: 8.53
Currently in 2nd year; School of Computer Science.

Roles & Involvement

2025–Present **Development Member**, *Microsoft Innovations Club (MIC)*, VIT Chennai
Contribute to full-stack tools and campus-facing software built by the club.

2026 **Development Member**, *GirlScript Summer of Code (GSSoC) 2026*
Open-source contributor across community projects.

Projects

- 2026 **Event Management — OrbitCheck**, Full-Stack & Event OS
Real-time campus event operating system and automated gate check-in platform, built for MIC and VIT Chennai.
- Engineered an automated webcam frame scanner using client-side canvas decoding with real-time database state synchronization.
 - Achieved sub-2-second check-in speed, 3-second live metrics sync, and cryptographically signed 2D QR passes to prevent duplicate entries.
 - Adopted by MIC at VIT Chennai for its digital entry management workflow.
- Stack: TypeScript, React/Next.js, Webcam QR Scanner, SQL, Real-Time Sync
- 2026 **Multi-Agent Autonomous Financial Intelligence**, Autonomous AI & Systems
A collaborative swarm of autonomous AI agents delivering fully cited financial intelligence in under 60 seconds.
- Built specialized agents for real-time news extraction, quantitative parsing, and risk modeling.
 - Delivered comprehensive, 100% source-cited financial dossiers with complete transparency.
- Stack: Python, Multi-Agent AI, LLM Orchestration, Market APIs, Data Pipelines
- 2026 **National Health Vault**, Secure Systems & Backend
Secure, centralized healthcare records management and digital vault architecture.
- Engineered an encrypted, role-based access vault with relational database design and patient dashboards.
 - Delivered a modular, OOP-based backend with AES encryption and 100% data integrity.
- Stack: TypeScript, SQL, AES Security, Backend REST API
- 2025 **Smart Irrigation IoT System**, IoT & Embedded Systems
Automated, telemetry-driven soil moisture monitoring and precision water management system.
- Built a microcontroller-based feedback loop in C/C++ integrating soil probes and automated solenoid valves.
 - Achieved a 40% efficiency gain in water usage with under 250ms telemetry delay; showcased at the university IoT exhibition.
- Stack: C/C++, IoT Sensors, Embedded Systems, Telemetry, Algorithms

Technical Skills

Languages C/C++, Java (OOP), Python, SQL

Domains Frontend (React, TypeScript), Backend (Node.js, REST APIs), OOP & DSA, Blockchain & Web3
